

# What Is Geography?

# Think, Pair, Share!

- 1 In the middle of your page, write 'Geography' in a bubble.
- 2 Around this, write as many topics you think we study in geography as you can think of. Remember what you learnt in primary school.
- 3 Share your ideas with your partner and add any ideas you hadn't thought of to your diagram.
- 4 We will take it in turns to share one idea each with the class. If you hear anything new, add it to your diagram!

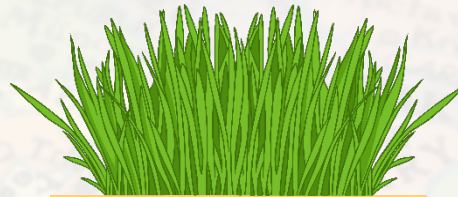

# Did You Think of All of These?

Add any you didn't get!

population

plants

weather and climate

rich/poor

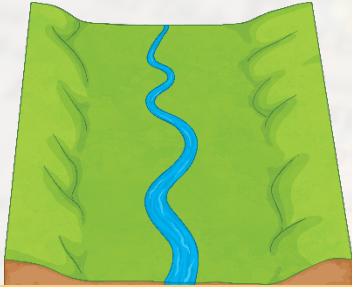

rocks

travelling

# Did You Think of All of These?

Add any you didn't get!

rivers

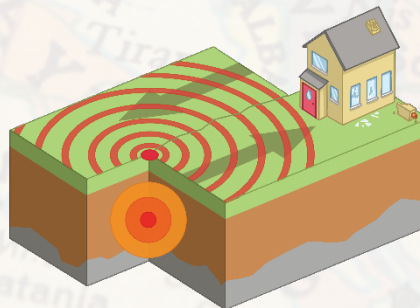

seas

waste and pollution

volcanoes

earthquakes

jobs

# Did You Think of All of These?

Add any you didn't get!

where people live/move to

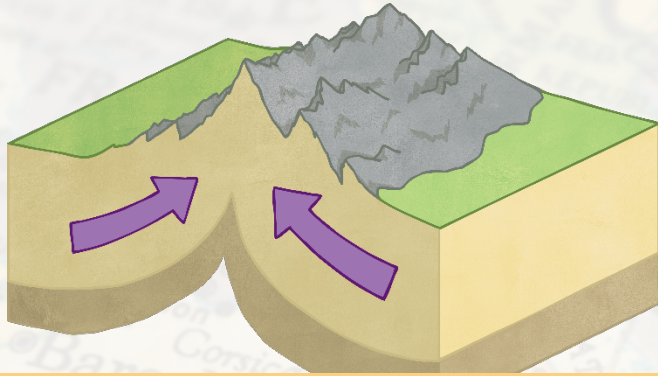

floods

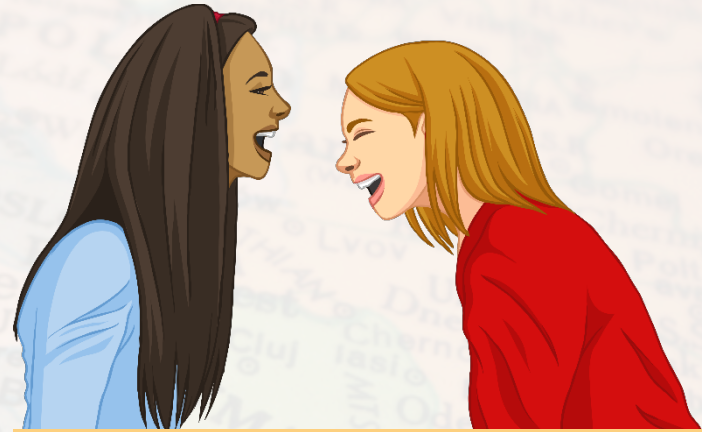

tourism

# Two Categories of Geography

physical geography:

The features of the world around us (oceans, mountains, earthquakes, etc.).

human geography:

What people do, such as where they live, how they make money and the effects of human interactions with each other and the planet.

# Two Categories of Geography

Choose two coloured pencils; assign one to 'physical geography' and the other to 'human geography'.

Look at each topic you have listed on your diagram and shade it according to which category you think it fits into.

If you are unsure of any, leave them uncoloured for the time being.

# Feedback

What did you put into each category?

Take it in turns to give feedback on topics for each side of the list.  
Colour in any you were unsure of if you hear them mentioned.

Physical	Human

# Divide Your Categories

With only two categories – physical and human – there is still a lot of topics to keep track of. If we were to divide each category further, what headings could we use?

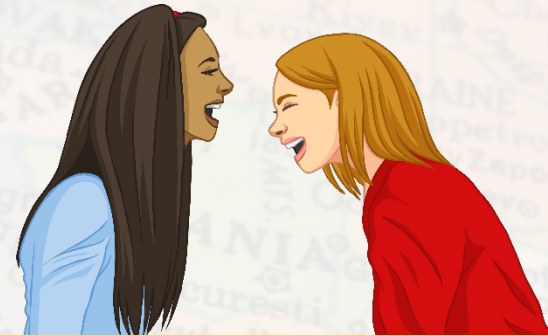

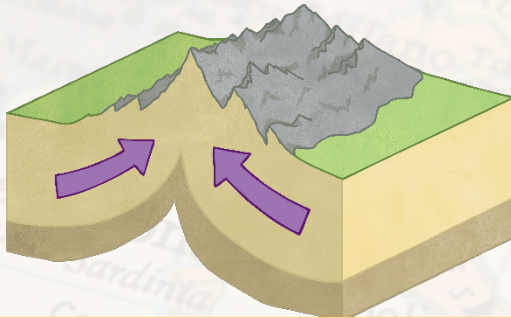

Talk to your partner and see what you can come up with!

# Divide Your Categories

Take it in turns to share your ideas with the group.

You will have your own ideas but here are some you might have thought of...

## physical geography:

- environment
- biology
- planetary
- natural disasters

## human geography:

- economy
- communities
- cultures
- disaster responses

# Plenary Quiz!

You are about to see some geographical images.

Put your hands in the air if you think the image represents physical geography; put your hands on the table if it represents human geography!
